

Leaving Google and Apple behind, Volla Phone offers unparalleled security & privacy through intelligent & simple user interface

Or

Built with a simple & smart user interface, Volla Phone is delivering unmatched security & privacy to the users

Or

Delivering incomparable security, privacy & simple user interface, Volla Phone is creating a disruption in the market

~ An emerging leader in the industry, Volla Phone 22 has established a more secure system in comparison to Google and Apple.

~ Created in Germany, the Volla Phone 22 delivers a combination of intelligent and minimalist user interface that delivers high performance.

~ The platform has successfully witnessed crowdfunding on Kickstarter with 1000% of the funding goal.

Germany, July 2022 - We live in an era where privacy is not attained easily; with smartphones at our fingertips, our movements are constantly tracked by AI apps.

Fathoming the above concern, legislation for censorship of undesired content and Apps was introduced by Europe. A survey at Statista stated that the Netherlands is the least secure country with the highest rate of cyber attacks at 17.64%. This percentage of attacks on the privacy and safety of the user via smartphones and the internet created a fervor amongst continents. With 18 countries in Europe restricting Torrent sites, Belarus and Turkey faced heavy censorship of political media. Turkey also

restricted the utilization of VPNs. Messaging and VoIP apps cannot be accessed across Europe.

Not limited to Europe, the U.S. was rated at 1.4% to encounter cyber threats through mobile apps, in contrast to Australia's 27%, China's 10%, and Russia's 5.5%.

The above restrictions were integrated to eradicate cybercrime via smartphones and called for a definite solution. Focussing on the sensitive issue, Germany-based Hallo Welt Systeme introduced the second-generation phone, Volla Phone 22, with a promise of security and 100% privacy. An Android operating system, Volla OS is built without Google Apps and Play Services. The MediaTek HyperEngine technology allows people to make decisions on sharing their data and with whom. The intelligent OS with a minimalistic user interface does not focus on apps and delivers consistent privacy protection with zero dependencies on a cloud.

Taking an evolutionary leap, a special Security Mode was added that blocks unwanted apps and internet connections. The users can show and hide apps as per choice, wherein a firewall blocks and allow certain web addresses. The user can define a blacklist and a whitelist. This feature is also ideal for parents who desire to block certain apps that are not age-appropriate and also reduces the risks of trackers tracking the phone. These new features transform the user interface into an exceedingly smarter, simpler, and clearer platform.

Unique usability features of the revolutionary 'Volla Phone 22'

Distracting users is the main criterion while gaining preferability with a specially developed operating system. The unique features of the Volla Phone 22 shortly summarized:

- **Springboard:** The Springboard's Smart Text Field assists the user in starting a call, searching websites, making notes, etc., instantly. The remarkable Red Dot feature shows the entire day's activities with one single gesture, which is animated in a quick menu.
- **Security Mode:** Security Mode with black- and whitelist choices to block unwanted apps and internet connections. The user can show and hide apps as per choice, a firewall blocks and allows certain web addresses.
- **Multi-Boot:** The user has access to alternative Operating Systems. They can be installed on a microSD card and boot as per requirement. With this feature, users can separate private and business use while benefiting from the freedom of using another OS.
- **Collections:** Recent news of subscribed feeds, favorites from the address book or the recently visited contacts and conversations are prompted by this shortcut.
- **Signal Integration:** The users can send Signal messages from the Text Field, open Signal profiles from the contact collection, and soon include Signal threads in the message collection.

These unique features transform the user interface into an exceedingly smarter, simpler, and clearer platform.

It is important to note that Kickstarter, a platform that transforms creative ideas into reality, introduces a wide range of remarkable products to the marketplace. The products gain unprecedented success with a promise of funding in multiple ways. Notably, 79 percent of the projects surpassed 20 percent of their set goal. The Volla Phone lies amongst these renowned projects by exceeding expectations through successful crowdfunding on Kickstarter with 1000% of the funding goal. Currently, the last components are in production, and the company started the production of the Volla Phone 22 in the third week of July. This achievement is praiseworthy and applaudable.

A Visionary, A Believer, And A Performer - The Man Behind 'Volla Phone 22'

The brilliant mind behind this excellent product, Dr. Jörg Wurzer, has a wealth of experience in philosophical research, publications, and lectures at international congresses on technology and philosophy. He also shared his skills and expertise as an author and journalist for media like Financial Times Deutschland and Süddeutsche Zeitung for 15 years. A professional in the field of AI, Wurzer stated, “I want to give people back the time and attention to have a free head for the things that count in life. And that is not the digital world.”

The Volla Phone 22 aims for people to reduce their screen time and pay attention to worthwhile things. Also, people are provided with faster and more elegant hardware, and an updated operating system that offers an edge over Apple and Google.

As the world's first smartphone, the Volla Phone 22 allows installing one or more additional operating systems on an external memory card, which is selected when the device is started. Initially, Ubuntu Touch will be available as a second operating system, which is also optionally available as the primary operating system on the Volla Phone 22. With this feature, users can separate private and business use while benefiting from the freedom of using another OS. Sailfish OS and Manjaro OS are two operating systems that are offered to the community.

Ubuntu Touch is an independent mobile Linux alternative and has its app store. A perfect alternative for minimalists, it delivers basic smartphone functions to the users. The user can select one OS when starting the Volla Phone 22.

Founded in Germany, this young company is reaching leaps and bounds with its innovation and technology. The phone is manufactured by Gigaset Communications in Bocholt, a Volla Phone partner, and includes unparalleled features:

Volla OS: Using the Quick Menu, the user can access frequently used websites and apps by simply tapping on “the red dot.” The phone fathoms the searches and makes auto suggestions for calls, messaging, websites, etc.

48 MP main camera + 8 MP ultra wide angle & macro

16 MP front camera for high resolution selfies & video calls

Display: Large 6.3" Full HD+ V-Notch

Storage: 4 GB RAM and 128 GB internal memory

Triple-Slot: Dual-SIM + memory extension up to 512 GB

Fast rechargeable and enduring 4500 mAh removable battery

Affordable, trendy, stylish, and safe, Volla Phone 22 is home to top-notch features and is available for €453 or €379 for users outside the EU, Volla is taking over the marketplace with affordability, exclusivity, and safety promised round the clock.

++++

About Us

Germany-based Hallo Walt Systeme introduced the Volla Phone 22, a second-generation phone of the Volla Phone series, with a focus on providing unparalleled privacy and security with its cutting-edge technology. Returning freedom to the users is another aspect the company aims at. The phone's technology, interface, and control elements allow complete control over personal information while preventing tracking from trackers. An innovative feature, the Springboard, allows the users to access functions with a single gesture, and a high-security system reduces parents' stress who worry for their children's safety.
