

The world in 2022: Nothing you would have expected.
Some of us are still overwhelmed and want to turn
back the clock...

ubuntu touch is **still** not dead

it's more alive than ever
(but a little bit more silent right now)

Ubuntu Touch in 2022

So, how did we do since the last year?

So, how did we do since the last year?

Ups's:

App ecosystem keeps growing

Steady investment into the 20.04 mission

Still maintaining 16.04 and even bringing in new
features

New board of directors and membership committee
have been elected

So, how did we do since the last year?

Down's:

We lost contributors

Halium has 95% contributions from us only

Userbase is growing veeery slowly

The gap towards up2date hardware and software is getting bigger

what we're working on right now

what we're working on right now

20.04 is where most resources are bound

OTA's for 16.04

Getting marketing streamlined

Strengthen cooperation with HW partners

Keep our users as happy as possible

what's hot on our endless backlog

what's hot on our endless backlog

VoLTE, VoWiFi

Video calls for native Apps

Cell Broadcast

Waydroid integration

eSIM

Bluetooth

Power Management

Policies for Apps in background

Device Backup & Recovery

questions?

we really need devs, btw.
