Cutie Shell
Community Project

Erik Inkinen
Volla Community Days 2023

About me

- I study Information Technology at Tampere University
- I am also a member of the Droidian team
  - Volla Community Days 2021: I had a demo about Droidian
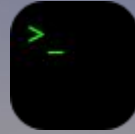

The mission of Cutie Shell

"Cutie Shell aims to be a pretty and easy-to-use mobile UI/UX for Linux devices running either Halium or mainline Linux. Our UI is inspired by Jolla's Sailfish OS, but we are not aiming for a clone. One major difference to Sailfish OS is that our source is completely open."

- Cutie Shell is developed by a small team consisting of:
  - Erik Inkinen (me) (current maintainer)
  - arpio23
  - Alexey T. (vin4ter) (founder of the project)
  - Xyn

Overview of the technical side

- Qt6 (We ported from Qt5 in early May)
- qml-module-cutie
  - Provides widgets following the Cuties's visual style
  - Provides API wrappers for applications to interact with the system
- Applications
  - Currently, the Cutie application assortment is: Browser, Messaging (SMS), Music, Phone, Settings, Terminal, Widget Playground
- The base system
  - The development concentrates around Droidian
  - I, personally, use Droidian on the Volla Phone
  - Cutie can be run on other systems; for example, I have tested it on postmarketOS
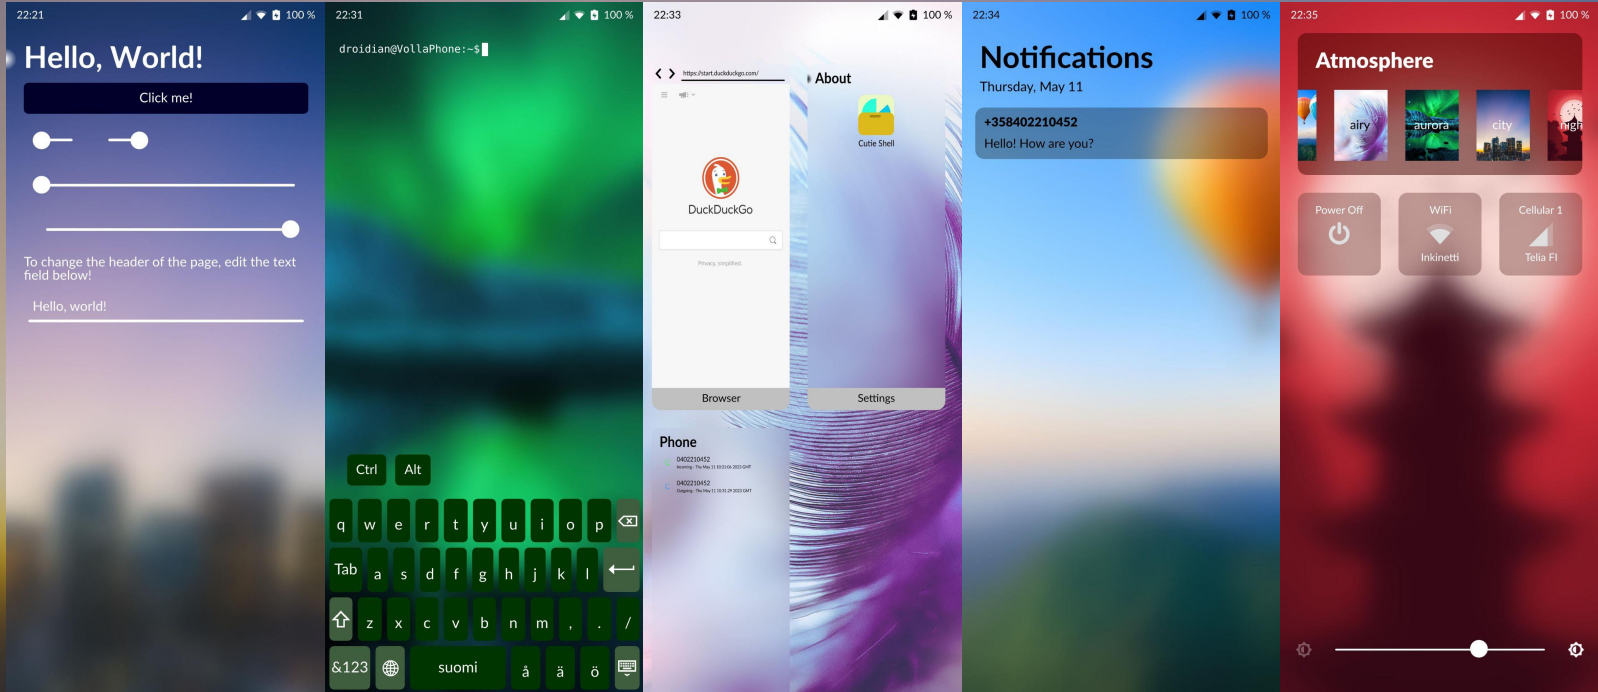

A bit more about the design

Icons

Font

Lato
Lato Thin
Lato Bold
Lato Black

Atmospheres are themes inspired by Sailfish OS's ambiences. And similarly, an atmosphere has its own wallpaper and a color palette.
